Skills

Langages and Frameworks

- Backend : Node.js, PHP, SpringBoot, .Net
- Frontend : Symfony, ReactJS, Bootstrap, Tailwind CSS, xml
- Mobile Development : Kotlin, Swift, Flutter
- DevOps : Docker, Kubernetes, Jenkins, CI/CD pipelines

Databases

- PostgreSQL, Firebase, MongoDB

Cloud & Hosting

- AWS, Google Cloud Platform, Microsoft Azure, Firebase Authentication

Collaboration and Project Management Tools

- Jira, Trello, Slack

General Skills

- UI/UX Design (Figma, Adobe XD)
- Test automatisé : Appium, JUnit, Mockito
- Sécurité des applications : OAuth, JWT

Additional Skills

- Méthodologies : Agile, Scrum APIs : REST, OpenAPI
- Blockchain : Solana, Ethereum (Smart Contracts)

Education

- **2021 – 2024 Mobile Development Engineering Degree**, ESPRIT Private Higher School of Engineering and Technology
- **2018 – 2021 Bachelor of Applied Science in Embedded & Mobile Systems**, Higher Institute of Technological Studies of Nabeul

Freelance Experience

- Freelance Web Development
- Community Engagement

Academic Projects

- **WeParent**: The complete parental control app monitors children's mobile activities. It offers screen time management, app blocking, location tracking, and safe zones. Developed with **Flutter** (parent interface) and **Kotlin Jetpack Compose** (child module), it relies on **Node.js**, **Express**, **Socket.IO**, and **MongoDB**.
- **MealMate**: Social application for food lovers to facilitate connections between cooking enthusiasts and enable shared culinary experiences. **Kotlin Jetpack Compose**, **Google Maps**, **Node.js**, **Express**, **TypeScript**, and **MongoDB**.
- **HollyFood**: FlavorExplorer App – Revolutionizing culinary experiences by promoting discovery of local restaurants, food ordering, and user reviews. Built with **SwiftUI**, **Google Maps**, **Node.js**, **Express**, **TypeScript**, and **MongoDB**.

Professional Experience

- 2023– 2024 3rd Year Engineering Internship**, Proservices Training Company. Design and implementation of a mobile application allowing users to share posts, stories, and reels, interact with friends' content through likes, comments, and reactions, as well as send friend requests via a matching system. Technologies used: Flutter (frontend), Go (authentication), Firebase (real-time messaging and notifications), Spring Boot (main backend).
- 2022– 2023 2nd Year Engineering Internship**, NAS- IT. Development of an online stock market application with Flutter, focusing specifically on the front-end aspect of the application.
- 2021– 2022 1st Year Engineering Internship**, Tek2050. Development of a Symfony application for property rental websites with online purchase functionalities.
- 2020– 2021 2nd Year Bachelor's Internship**. Construction and programming of an automated vaccination system for chicks, integrated with an Android application to track statistics.
- 2019 – 2020 3rd Year Bachelor's Internship**, Construction and programming of a remote-controlled robot via an Android application.
